## CLASSES OF FIRE:

Fires are classified according to the material that is burning. Fire extinguishers are rated by the area each will cover for a particular class of fire. The higher the number, the bigger the fire area you can fight.

**Note: Maintenance and recharging of all fire extinguishers should be performed by a qualified service company.**

**CLASS A** fires are the most common. They involve ordinary combustibles such as wood, paper, cloth, rubber, a number of plastics, and other ordinary materials.

**CLASS B** fires are caused by gasoline, grease, oil, paint and other flammable liquids. Commonly strikes in warehouses and manufacturing plants.

**CLASS C** for live electrical equipment. Often occurs in computers, monitors, wiring and appliances.

# Emergency Eyewash & Shower Equipment

## A GUIDE TO EMERGENCY EYEWASH & SHOWER EQUIPMENT

Emergency showers, eyewashes and tepid water delivery systems are required to provide emergency treatment in preventing permanent eye and skin damage from accidental exposure to chemicals, biohazards or airborne debris.

In the absence of a uniquely Canadian standard for the design and placement of emergency eyewash and shower equipment, provincial authorities in all jurisdictions in Canada refer to the ANSI Z358.1-2009 standard for recommendations and enforcement regarding emergency eyewash and shower requirements.

Emergency drenching fixtures must be readily accessible for use in manufacturing, laboratories, refineries, mines, construction sites and wherever workers may be accidentally splashed or sprayed with injurious solvents, acids, harmful particulates and, in some cases, biological hazards.

### KEY REQUIREMENTS FROM THE ANSI STANDARD Z358.1-2009 INCLUDE:

- Device must be positioned within 10 seconds (55') from hazard
- Device must be activated in one second or less
- Device must be capable of delivering minimum flow of flushing fluid for at least 15 minutes\*
- Device must provide "tepid" water (16-38°C, 60-100°F)
- Device must be activated weekly to remove dust/debris
- There must be no obstruction in the pathway to the device
- The water supply uninterrupted at the valve
- Device must be identified with highly visible signage
- Device must be well lighted
- Device must be fully inspected annually

**\* Because of the limited quantity of fluid they contain, supplemental eyewash devices alone (such as bottled eyewash) cannot meet the 15 minute flushing requirements in the ANSI standard. These should be used for initial first aid only to treat a patient during the path to certified eyewash. You should never substitute a fully compliant eyewash station with supplemental devices.**

Safety flushing devices are not a substitute for primary personal protective devices such as proper eyewear and clothing. Chemical MSDS' dictate proper first aid measures in case of accidental exposures.

Depending on site conditions and severity of the hazard, emergency eyewash and shower devices are found in various forms including:

- Plumbed-In
- Enclosed Safety Showers
- Portable
- Laboratory
- Tempering Systems
- Supplemental Devices

### THE COMPLETE ANSI STANDARD IS AVAILABLE FROM:

# Emergency Eyewash & Shower Equipment

**Plumbed-in eyewash stations and showers** are designed to direct a fixed water source to eyes, face or body in emergencies. Wall mount or pedestal-mounted eyewash stations and eye/face washes should be located nearest the point of need but no more than 10 seconds (55') from the hazard.

# Emergency Eyewash & Shower Equipment

**Water Tempering Products** are designed to meet ANSI standard Z358.1-2009 requirements to deliver "tepid" water to injured workers. In addition to discouraging use of a safety flushing device, a 15-minute deluge of cold water to the injured worker can negatively affect core body temperature, and hypothermia can result. Therefore, ANSI standard Z358.1-2009 requires emergency showers and eyewash stations to deliver "tepid" water. ANSI defines "tepid" water as 15.6°C to 38°C (60-100°F). Tempering solutions include steam, instantaneous (on demand) heaters and thermostatic mixing valves (TMV's). TMV's blend hot and cold water to meet strictly specified water temperature ranges.

## THERMOSTATIC MIXING VALVES

- Blend hot and cold water to a comfortable flushing temperature
- Reliable liquid-filled thermostat with a 10-year manufacturer's warranty
- Check stops on inlets
- Adjustable set point within temperature range
- Accurate temperature control to within  $\pm 3^{\circ}\text{F}$
- Built-in cold water bypass, assuring cold flow
- Easy installation and serviceability
- Positive shut-off of hot supply when cold supply is lost
- Dirt and lime resistant
- Dial thermometer
- Factory assembled and tested
- Universal mounting capability
- Rough bronze finish
- SEI certified to ANSI standard Z358.1-2009
